

Gravity 重力

Gravity

Friction

Force

Magnetism

Mass

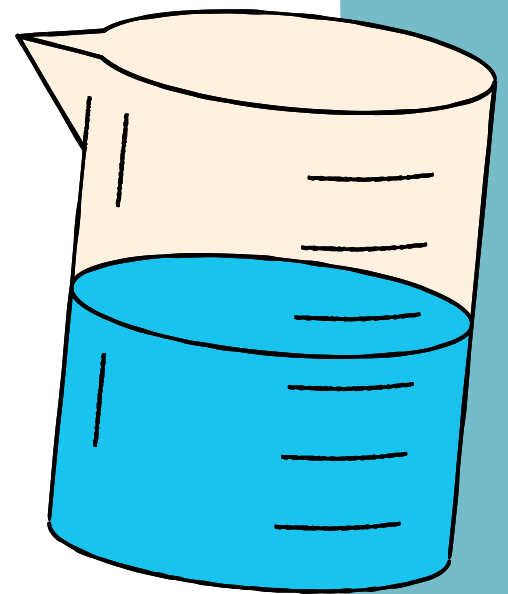

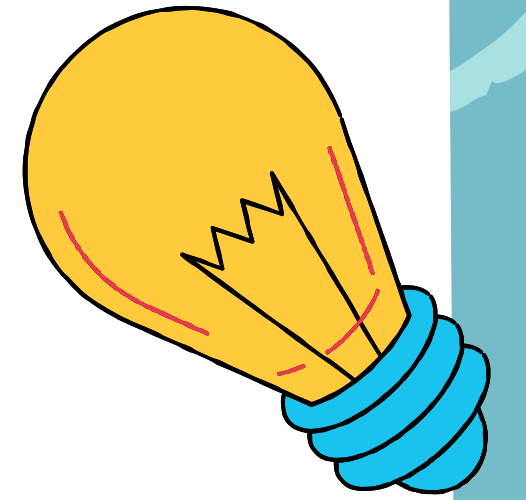

Accelerate

Inertia

Velocity

Object

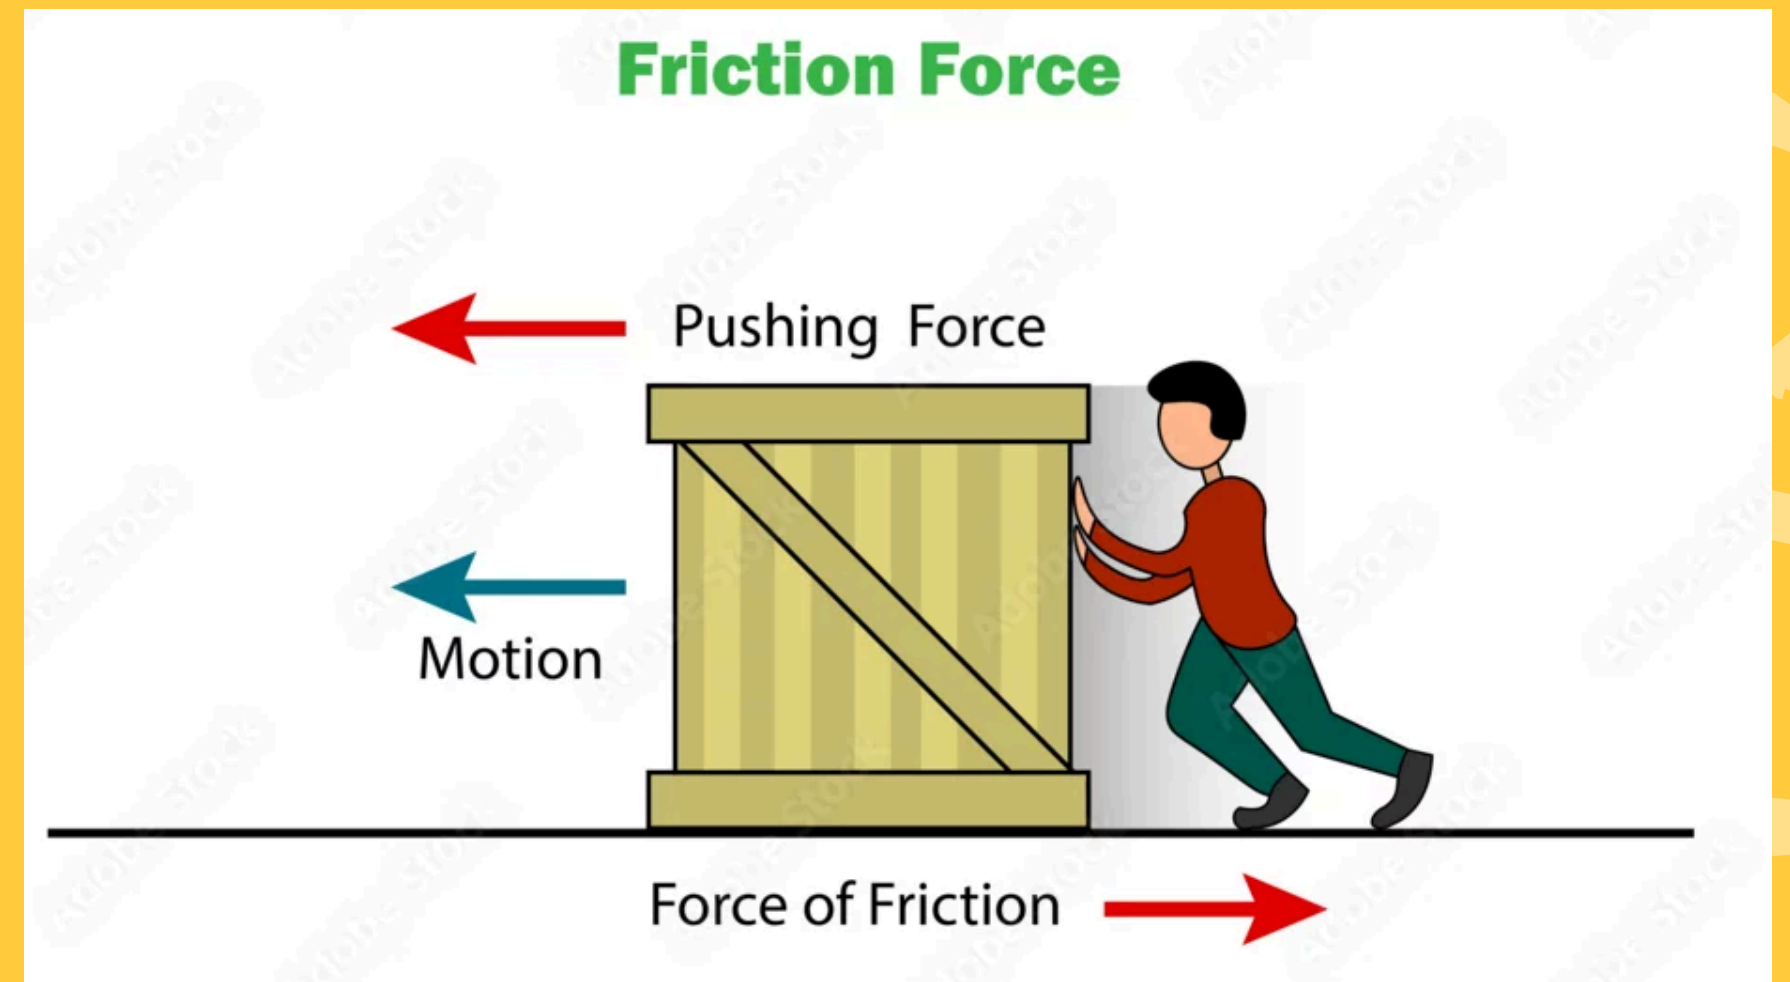

Motion

Force 力

A push or pull that makes things move or stop.

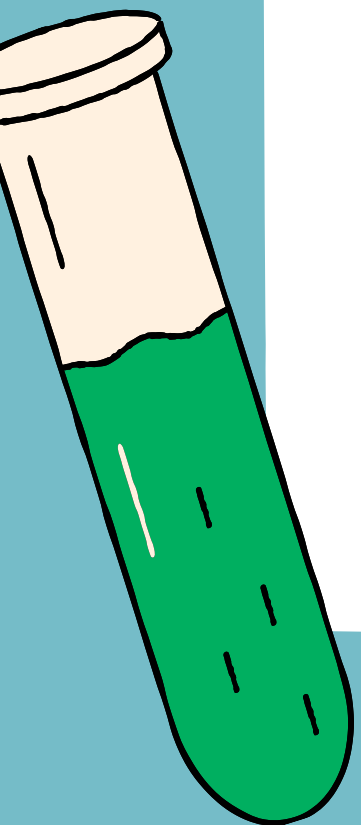

Example: You use force when you push a door open.

Inertia 慣性

When something wants to keep doing what it's already doing (like staying still or moving).

Example: A ball will stay still until you kick it, and it will keep rolling until something stops it.

Discussion

HOW DOES GRAVITY AFFECT YOU DAILY?

WHAT WOULD HAPPEN IF THERE IS NO GRAVITY?

HOW CAN REDUCING FRICTION MAKE THINGS MOVE FASTER?
